Questions On Simultaneous Equations 1

Solve the simultaneous equations algebraically.

1.	$y = x + 2$	$y = 2x - 3$
2.	$y = 2x - 1$	$y = x - 7$
3.	$y = x + 1$	$y = 4x - 2$
4.	$y = 3x - 6$	$y = x + 4$
5.	$y = x + 5$	$y = 5x + 3$
6.	$y = 2x + 4$	$y = 6x - 8$
7.	$y = 14 - x$	$y = x - 1$
8.	$y = \frac{1}{2}x - 10$	$y = 9 - 4x$
9.	$y = 12 - \frac{1}{3}x$	$y = \frac{2}{5}x + \frac{1}{4}$
